DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-3, drawn to a eukaryotic host cell co-transformed with nucleic acid molecule encoding beta2 microglobulin, MHC class I heavy chain and an antigenic peptide, classified in class 435, subclasses 325 and 410.
 - II. Claims 1, 2 and 4, drawn to a prokaryotic host cell co-transformed with nucleic acid molecule encoding beta2 microglobulin, MHC class I heavy chain and an antigenic peptide, classified in class 435, subclass 252.1.
 - III. Claims 5-14, drawn to a method of producing a functional MHC class I molecule in a bacterial cell, classified in class 435, subclass 69.1.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are characterized by different host cell types, which require different expression vectors and promoters for expression of the product.
3. Inventions II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions the method of Group II does not use the product of Group II, as the method of Group III does not require the use of a prokaryotic host cell co-transformed with nucleic acid molecule encoding beta2 microglobulin, MHC class I heavy chain and an antigenic peptide wherein the beta-2 coding sequence is translationally fused upstream of the MHC class I heavy chain coding region.
4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
5. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
